	Consequences within the Detail Area of Interest on 18/04/2013
Potentially Affected Population	< 5 inhabitants
Landslide Affected Area	60.1 ha

**Map Information**

Following the extraordinary heavy rains of the last weeks in the Emilia-Romagna region, several landslides occurred. The landslides are spread throughout the region. A synthetic description of the situation is the following:

- 1400 landslide events till now; more are likely to occur;
- 60 people evacuated;
- 100-150 municipalities affected, spread over 11,000 km<sup>2</sup>.

The worst affected areas include the municipalities of Capriglio, Signatico and Boschetto, close to Tizzano Val Parma (Parma) and San Benedetto Val di Sambro (Bologna). The users of the map are Civil Protection authorities involved in field operations. The purpose of the map product is the support of emergency response activities.

**Data Sources**

Inset maps based on: Administrative boundaries (JRC 2013, GISCO 2010, © EuroGeographics), Hydrology (CCM2 2007 © JRC), Transportation (Natural Earth, 2012), Settlements (OpenStreetMap, 2013).

WorldView-2 © DigitalGlobe (acquired on 18/04/2013 10:58 UTC, GSD 0.58 m, approx 14% cloud coverage, 27.5° off-nadir angle).

Background imagery outside satellite footprint © AGEA 2013 (acquired in 2010, GSD 0.5 m, 0% cloud coverage).

Base vector layers based on Regione Emilia-Romagna datasets (settlements, http://dati.emilia-romagna.it/, approx. 1:5,000, extracted on 15/04/2013), Geoportale Nazionale (transportation and hydrology, http://wms.pcn.minambiente.it/GN, approx. 1:15,000, extracted on 17/04/2013), OpenStreetMap and Geonames (approx. 1:10,000, extracted on 15/04/2013), refined by ITHACA.

Population estimates based on Landsat 2010 © UT BATTELLE, LLC.

Elevation data: EU-DEM (25 m posting).

All Data sources are complete and with no gaps.

**Dissemination/Publication**

RESTRICTED USE.

Delivery formats are GeoTIFF, GeoPDF, GeoJPEG and vectors (shapefile and KML formats).

**Framework**

The products elaborated in the framework of current mapping in rush mode activation are realized to the best of our ability, within a very short time frame during a crisis, optimising the available data and information. All geographic information has limitations due to scale, resolution, date and interpretation of the original data sources. The products are compliant with GIO-EMS RUSH Product Portfolio specifications.

**Map Production**

The present map shows the delineation of the landslide affecting the area of San Benedetto Val di Sambro (Bologna), derived by means of visual interpretation of post-event WorldView-2 © DigitalGlobe (acquired on 18/04/2013, GSD 0.58 m, approx 14% cloud coverage, 27.5° off-nadir angle). The basic topographic features are derived from public datasets, refined by means of visual interpretation of pre-event aerial orthomaps © 2013 courtesy of AGEA (acquired in 2010, GSD 0.5 m, 0% cloud coverage).

Post-event satellite imagery has been radiometrically enhanced and ortho-projected with RPC approach (using EU-DEM elevation data).

The estimated geometric accuracy of this product is 5 m CE90 or better, from native positional accuracy of the background aerial orthomaps.

The estimated thematic accuracy of this product is 85% or better, as it is based on visual interpretation of recognizable items on very high resolution optical imagery (detecting changes in respect to the reference data). Shadowed area, included in the map, are zones of lower interpretation accuracy due to the poorer image radiometry.

Map produced on 19/04/2013 by ITHACA under contract 257219 with the European Commission. All products are © of the European Commission.

Name of the release inspector (quality control): e-GEOS (ODO).
