Data Sources

Inset maps based on: Administrative boundaries (JRC 2013, GISCO 2010, © EuroGeographics), Hydrology, Transportation (Natural Earth, 2012, CCM River DB © EU-JRC 2007), Settlements (Gsonames, 2013).

Framework

The products elaborated in the framework of current mapping in rush mode activation are realized to the best of our ability within a very short time frame during a crisis, optimising the available data and information. All geographic information has limitations due to scale, resolution, date and interpretation of the original data sources. The products are compliant with GIO-EMS RUSH Product Portfolio specifications.

Map Production

The present map shows basic topographic features such as transportation, hydrology and settlements in the area of Doboj (BOSNIA AND HERZEGOVINA). These basic topographic features are derived from public datasets, refined by means of visual interpretation of pre-event orthoimagery from: RapidEye © BlackBridge (acquired on 23/10/2013 10:49 UTC, GSD 6.5 m, 0% cloud coverage).
Thematic layers, assessing the delineation of the event, have been derived from post-event images: Radarsat-2 © MDA (acquired on 22/05/2014 04:52 UTC, GSD 5 m) Ltd. all rights reserved, and SPOT6 © Airbus Defence and Space 2014 (acquired on 21/05/2014 09:03 UTC, GSD 1.5 m, approx. 0% cloud coverage).
All satellite images have been radiometrically enhanced and orthorectified with RPC approach (using SRTM elevation data).
The estimated geometric accuracy of this product is 35 m CE90 or better, from native positional accuracy of the background satellite image.
The estimated thematic accuracy of this product is 85% or better, as it is based on visual interpretation of recognizable items on high resolution optical imagery. Shadowed areas are zones of lower interpretation accuracy due to the poorer image radiometry.
Only the area enclosed by the Area of Interest has been analyzed.
