

Campo di Mare - ITALY

Phytosanitary emergency - 10/04/2015

Delineation Map

Cartographic Information

1:10000 Full color ISO A1, medium resolution (200 dpi)

0 0,25 0,5 1 km

Grid: WGS 1984 UTM Zone 33N map coordinate system
Tick marks: WGS 84 geographical coordinate system

Legend

- Crisis Information**
 - Olive Tree, Eradicated
 - Fruit Trees, Pruned
 - Fruit Trees, Pruned, Tilled
 - Olive Trees, Pruned
 - Olive Trees, Pruned, Tilled
- Administrative boundaries**
 - Municipality
- Transportation**
 - Primary Route
 - Secondary Road
 - Local Road
- General Information**
 - Area of Interest

Consequences within the AOI on 04/05/2015				
Crop Land	Olive Trees Pruned	ha	62,4	470
	Olive Trees Pruned, Tilled	ha	67,6	
	Fruit Trees, Pruned	ha	1,8	
	Fruit Trees, Pruned, Tilled	ha	1	
	Olive Trees Eradicated	No.	9	N/A

Map Information

The Apulia region, in Southern Italy, has been affected by a phytosanitary emergency, the *Xylella fastidiosa* (bacterium included on the EPPO A1 List since 1981). In the territory of Lecce, Salento peninsula, quick decline symptoms were observed on olive trees (*Olea europaea*). Due to the progressive spread of the bacterium and the potentially threatening other crops and regions, this emergency has assumed severe proportions, with heavy economic, environmental and social consequences. In order to manage the emergency, a special task force has been defined.

The emergency plan foresees the eradication of all the plants potentially affected by the infection, in order to create a phytosanitary barrier to stop its expansion. The area interested by this activity is 40 km long and 5 km thick.

The eradication activity has started since one week, and will be concluded at the end of April. The core users of the map are Civil Protection authorities involved in in-field operations.

The scope of the map production is planning and support to logistics.

Relevant date and time records (UTC)			
Event	10/04/2015 09:00	Last crisis status	04/05/2015 09:52
Activation	24/04/2015 19:00	Map production	08/05/2015

Data Sources

Pleiades © CNES 2013, Distribution Airbus Defence and Space /SPOT Image S.A. (acquired on 04/05/2015 09:52 UTC, GSD 0.5 m, approx. 0% cloud coverage, 26° off-nadir angle). All rights reserved, provided under ESA CSC-DA DWH License.

Aerial orthoimages © e-GEOS (acquired in 2010, GSD 0.5 m).

Base vector layers based on Geoportale Nazionale © 2011 Ministero dell'Ambiente - Geoportale Nazionale, refined by e-GEOS. Source information is included in vector data.

Elevation data: EU-DEM (25m posting). Height in meters above mean sea level.

All Data sources are complete and with no gaps.

Inset maps based on: Administrative boundaries (JRC, 2013, GISCO 2010, © EuroGeographics), Hydrology, Transportation (Natural Earth, 2012, CCM River DB © EU-JRC 2007), Settlements (Geonames, 2013).

Dissemination/Publication

Delivery formats are GeoTIFF, GeoPDF, GeoJPEG and vectors (shapefile and KML formats). Map products available in the Copernicus EMS Portal at the following URL: <http://emergency.copernicus.eu/mapping/list-of-components/EMSR124>

All products are © of the European Union.

Disclaimer

The products elaborated in the framework of current mapping in rush mode activation are realized to the best of our ability, within a very short time frame during a crisis, optimising the available data and information. All geographic information has limitations due to scale, resolution, date and interpretation of the original data sources. The products are compliant with Copernicus EMS Rapid Mapping Product Portfolio specifications.

Map Production

The present map shows the current situation in the area of Campo di Mare (Apulia - Italy). The basic topographic features such as transportation network, hydrology, toponyms and administrative boundaries in the area of Campo di Mare are derived from public datasets, refined by means of visual interpretation of pre-event aerial orthoimages.

Thematic layers, assessing the delineation of the event, have been derived from difference between Pleiades post-event image and aerial orthoimages.

All satellite images have been radiometrically enhanced and orthorectified with RPC approach using EU-DEM elevation data.

The estimated geometric accuracy of this product is 5 m CE90 or better, from native positional accuracy of the background satellite image.

The estimated thematic accuracy of this product is 85 or better, as it is based on visual interpretation of recognizable items on very high resolution optical imagery.

Only the area enclosed by the Area of Interest has been analyzed.
