	Olive Trees, Tilled	ha	597.6		
	Tilled Fields	ha	151		

Xylella fastidiosa (bacterium included on the EPPO A1 List since 1981). In the territory of Lecce, Salento peninsula, quick decline symptoms were observed in olive trees (Olea europea). Due to the progressive spread of the bacterium and the potential impact on other crops and regions, the emergency reached proportions with heavy economic, environmental and social consequences. The emergency plan foresees the eradication of all the plants potentially affected by the infection, in order to create a phytosanitary barrier to stop its expansion. The area of interest for this activity is 40 km long and 5 km wide. The core users of the map are Civil Protection authorities involved in in-field operations. The scope of the

Geoportale Nazionale, refined by SIRS. Source information is included in vector data. Elevation data: EU-DEM (25m posting). Height in meters above mean sea level.

Delivery formats are GeoTIFF, GeoPDF, GeoJPEG and vectors (shapefile and KML formats). Map products available in the Copernicus EMS Portal at the following URL: http://emergency.copernicus.eu/mapping/list-of-components/EMSR124

The products elaborated in the framework of current mapping in rush mode activation are realized to the best of our ability, within a very short time frame during a crisis, optimising the available data and information. All geographic information has limitations due to scale, resolution, date and interpretation of the original data sources. The products are compliant with Copernicus EMS Rapid Mapping Product Portfolio specifications.

The present map shows the current situation in the area of Torchiarolo (Apulia - ITALY). The basic topographic features such as transportation network, hydrology, toponyms and administrative boundaries are derived from public datasets, refined by means of visual
