Consequences within the AOI

	Unit of measurement	Affected	Total in AOI
Flooded area	ha	6215	6215
Estimated population	No. of inhabitants	577	157215
Transportation	Bridge	No. 0	55
	Heliport	No. 0	2
	Aerodrome	No. 0	14
	Motorways	km 0.2	174.8
	Primary roads	km 3.1	539.1
	Secondary roads	km 2.4	589.4
	Local roads	km 2.4	262.7
Railways	km 0.5	249.4	

Map Information

Hurricane Matthew is an ongoing very powerful tropical cyclone over the Caribbean and Atlantic Ocean. Since forming on 28 September 2016, it has severely impacted Haiti, and to a lesser extent Jamaica, Cuba, the Dominican Republic, the Bahamas and the Lesser Antilles. It is expected to significantly impact the southeastern United States, especially the U.S. state of Florida, as well as Georgia, South Carolina, and North Carolina. Heavy rains, strong winds and storm surge may affect the areas along its path. The effects of the storm will be unlike any hurricane in decades, the U.S. weather service reports.

The present map shows the wind storm delineation in the area of Sheldon. The thematic layer has been derived from post-event satellite image using a semi-automatic approach. The estimated geometric accuracy is 5 m CE90 or better, from native positional accuracy of the background satellite image.

Disclaimer

Products elaborated in this Copernicus EMS Rapid Mapping activity are realized to the best of our ability, within a very short time frame, optimising the available data and information. All geographic information has limitations due to scale, resolution, date and interpretation of the original sources. No liability concerning the contents or the use thereof is assumed by the producer and by the European Union.

Please be aware that the thematic accuracy might be lower in urban and forested areas due to inherent limitations of the SAR analysis technique.
