

# Neumark - GERMANY

## Flood - Situation as of 26/05/2018

### Delineation Map

**Cartographic Information**

1:17000      Full color ISO A1, medium resolution (200 dpi)

0   0.35   0.7   1.4 km

Grid: WGS 1984 UTM Zone 33N map coordinate system  
Tick marks: WGS 84 geographical coordinate system

**Legend**

**General Information**

- Area of Interest
- Not Analysed

**Placenames**

- Placename

**Administrative boundaries**

- Region
- Municipality

**Built-Up Area**

- Residential
- Hotel and similar
- Industrial building and warehouse
- Industrial
- Reservoir, silos and warehouse
- Public entertainment
- School, university and research
- Non-residential farm
- Other building not elsewhere classified
- Multi-functional

**Hydrography**

- River
- Stream

**Hydrography**

- Lake
- Reservoir

**Transportation**

- Primary Road
- Secondary Road
- Local Road
- Cart Track
- Long-distance railway

**NO FLOODED AREAS CAN BE DETECTED FROM THE ANALYSED SATELLITE IMAGERY**

**Map Information**

Hours of heavy rain and thunderstorms led to massive flash floods between the 24th and 25th May 2018 in the Vogtland region of Saxony in Germany. Damages and traffic obstructions have been reported. Areas around the White Elster river were particularly affected and the Pirik barrage had to let of around 150 cubic meters per second which caused floods downstream. Damage evaluation is of prime importance for the Saxon State Ministry of Environment and Agriculture.

The present map shows the flood delineation (for specific disaster types) in the area of Neumark (Germany). The thematic layer has been derived from post-event satellite image using a semi-automatic approach OR by means of visual interpretation. The estimated geometric accuracy is 5 m CE90 or better, from native positional accuracy of the background satellite image.
