Facilities			
Construction for mining or extraction	ha	0.0	203.2

Map Information

Due to heavy rainfall during the last 48 hours, thousands of acres of agricultural land are estimated to be under water in the broader area of Chrysoupoli in the north-eastern Greece. The River Nestos as well as other rivers burst their banks. Landslides occurred and parts of national roads in the area were inundated. The General Secretary for Civil Protection has declared the State of Emergency in that area.

The present map shows the damage grade assessment in the area of Chrysoupoli/GREECE. The thematic layer has been derived from post-event satellite image using a by means of visual interpretation. The estimated geometric accuracy is 5 m CE90 or better, from native positional accuracy of the background satellite image.

Disclaimer

Products elaborated in this Copernicus EMS Rapid Mapping activity are realized to the best of our ability, within a very short time frame, optimising the available data and information. All geographic information has limitations due to scale, resolution, date and interpretation of the original sources. No liability concerning the contents or the use thereof is assumed by the producer and by the European Union.
Please be aware that the thematic accuracy might be lower in urban and forested areas due to inherent limitations of the SAR analysis technique.

Map produced by GAF AG released by SERTIT (ODO).
