

Sanjitac - AFGHANISTAN

Humanitarian - Situation as of 27/12/2018

Delineation Map - MONIT09

Cartographic Information

1:10000 Full color ISO A1, medium resolution (200 dpi)

Grid: WGS 1984 UTM Zone 41N map coordinate system
 Tick marks: WGS 84 geographical coordinate system

- #### Legend
- Crisis Information**
 - New (Green square)
 - Changed (Yellow square)
 - No longer present (Red square)
 - Unchanged (Pink square)
 - Tent camp**
 - New (Green outline)
 - Changed (Yellow outline)
 - No longer present (Red outline)
 - Unchanged (Pink outline)
 - General Information**
 - Area of Interest (Green outline)
 - Administrative boundaries**
 - Province (Dashed line)
 - Placenames**
 - Placename (Circle)
 - Hydrography**
 - Stream (Blue line)
 - Land Subject to Inundation (Blue outline)
 - Transportation**
 - Primary Road (Yellow line)
 - Secondary Road (Orange line)
 - Local Road (Grey line)
 - Cart Track (Black line)

The crisis layer has been derived by the analysis of the situation on 20/12/2018 and on 27/12/2018

Consequences within the AOI		Total in AOI			
Stable Population	Unit of measurement	new	changed	no longer present	unchanged
	Number of inhabitants	393			
Tent camp	ha	0.8	10.0	0.2	11.1
Tent	No.	1055	16	1311	2803

Map Information

The livelihoods of millions of Afghans are currently being decimated due to drought, which is affecting numerous provinces and regions across the country, and leading to the displacement of thousands of households that can no longer sustain themselves in their areas of origin, having had a failed harvest, lost livestock, and lacking water and livelihood opportunities. (Source: ReliefWeb) There is a risk of floods in the near future in the area where the IDP camps are located. The maps will be used to assess possible floods, the spread of the settlements and transport information if available.

The present map shows the current situation in the area of Sanjitac (Afghanistan). The thematic layer has been derived from post-event satellite image by means of visual interpretation. The estimated geometric accuracy is 5 m CE90 or better, from native positional accuracy of the background satellite image.
