

San José - MEXICO

Wildfire - Situation as of 01/04/2022

Delineation MONIT02 - Overview map 01

Cartographic Information

1:20000 Full color A1, 200 dpi resolution

Grid: WGS 1984 UTM Zone 14N map coordinate system
 Tick marks: WGS 84 geographical coordinate system

Legend

- Crisis Information**
 - Active Flames
 - Burnt Area
- General Information**
 - Area of Interest
 - Not Analysed
- Hydrography**
 - Stream
- Transportation**
 - Cart Track
- Physiography & Land Use - Land Cover**
 - Features available in the vector package

Consequences within the AOI		
	Affected	Total in AOI
Burnt area	ha	2 916.7
Active Flames	No.	12
Estimated population		9
Transportation	km	5.1
Land use	ha	2 916.7
		7 171.1

Full table available in the vector package

Map Information

As of 29 March, and starting since 25 March, up to 44 forest fires are active in Mexico. Some Federal States such as Nuevo León and Tamaulipas have been seriously affected, with up to 1,500 hectares burnt. In Nuevo León Civil Protection authorities reported that the fires in the Sierra de Santiago have not stopped yet, leading to the emergency evacuation of local communities.

The present map shows the fire delineation in the area of San José (Mexico). The thematic layer has been derived from post-event satellite image by means of visual interpretation. Due to dense smoke, the burnt area delineation is not complete. The scale of analysis is 1:20000. The estimated geometric accuracy (RMSE) is 5 m or better, from native positional accuracy of the background satellite image. The minimum mapping unit (MMU) is 400 sq. m.

Disclaimer

Products elaborated in this Copernicus EMS Rapid Mapping activity are realized to the best of our ability, within a very short time frame, optimising the available data and information. All geographic information has limitations due to scale, resolution, date and interpretation of the original sources. No liability concerning the contents or the use thereof is assumed by the producer and by the European Union.
 The current Burnt Area Delineation cumulates all burnt area extents from previous post-event products.

Delivery formats are Layered Geospatial PDF, GeoJPEG and vector (ESRI shapefiles, Google Earth KML, GeJSON).

Map produced by SERTIT released by e-GEOS (ODO).
